

Let's write code

① Download & Install nodeJS into your system.

② Open CMD and write node.

It will start Read, Evaluate, Print Loop (REPL) into CMD.

③ Now, we can run any JS in CMD

④ we can run JS into console also.

⑤ Create app.js file in vs code

app.js

```
var name = 'Sangantan'  
var a = 10;  
var b = 20;  
console.log(name);  
console.log(a+b);
```

Terminal

node app.js ← CMD to run
Sangantan
30

Things to know →

Like we have window object in Browser console, we have a global object in NodeJS which gives us access to global functions such as setTimeout set Interval.
